The background is a dark, almost black, marble surface with intricate, flowing veins of a golden-yellow color. The veins vary in thickness and direction, creating a complex, organic pattern. Overlaid on the left side of the image are several overlapping, thin, gold-colored geometric shapes, primarily squares and rectangles, some of which are slightly rotated. The text 'MARBLE SERIES' is centered within these shapes.

SLIP RESISTANCE ACCORDING TO ANNEX B OF STANDARD EN 16165:2022

Many European flooring manufacturers use tests like the ramp test to rate their products according to their slip resistance. These tests are generally conducted using Annex B of standard EN 16165: 2022. With this method, a person walks backwards and forwards on an impregnated ramp-type floor used as a test bench. The angle of the ramp is gradually increased until the person slips. The average angle at which the person slips is used to calculate the CoF (coefficient of friction). Annex B of EN 16165: 2022 uses safety boots and engine oil as a substance to impregnate the surface to be tested, which are described in the standard itself.

Ramp method (DIN 51130)	
Total mean value of slip angle	Rating
6° <= Angle <= 10°	R9
10° < Angle <= 19°	R10
19° < Angle <= 27°	R11
27° < Angle <= 35°	R12
35° <= Angle	R13
